

BIOLOGIST

Responsibilities:

The successful candidate must have experience in implementation of relevant experimental technologies to facilitate the development of biological research. A thorough understanding of fundamental concepts in molecular biology is an essential requirement. Apart from the research development of Davos' Tocotrienols, the responsibilities include general lab maintenances, purchasing of lab materials and any other duties assigned by the immediate supervisor. Candidates must be highly motivated and present strong interest in the field of biotech research. Candidate will work closely with a group of scientists and biologist in the R&D laboratory.

Requirements:

Candidate should possess BSc in Biology/Life Sciences or equivalents. Must have laboratory experience in cell culture, RT-PCR, western blot, flow cytometry immunohistochemistry, *in vivo* imaging, and animal work. Must be a team player with positive attitude, confident and good technical writing skills. The ability to work independently with minimal supervision is necessary.
